

EMTx Config App

The IK Trax EMTx Config Android App provides an intuitive interface for configuring the EMTx series of EM transmitters. Available for both Android and Windows, the app allows users to connect via Bluetooth or a USB endcap (transmitter model dependent.)

Key Benefits

- Users can adjust transmitter settings themselves on-site, eliminating the need to return to IK Trax for reconfiguration.
- Ensure transmitters are appropriately configured for each job, avoiding a one-size-fits-all approach.
- Visualise how parameters like pulse rate and power affect battery life, enabling users to find the perfect balance for their project's needs.
- Use the screen capture feature to easily record and store the applied transmitter configuration for future reference.
- Set a delayed start to install transmitters in advance without draining the battery, optimising deployment flexibility.
